In the TTS ARTIC, some of the rare units are pooled together with the more frequent similar allophones due to the expectation of unnatural artefact occurrences when the algorithm does not have enough candidates for the selection. However, this pooling introduces another kind of intrusive effects, when an "incorrect" allophonic variant is chosen without the algorithm knowing to do so. Determining which of the units should not be pooled (for which speaker) was carried out in RA1c.

Note:

Je snadné ten text napsat, ale velmi těžké ho zkrátit tak, aby se vešel do 400 znaků ...
